

START Awarded Three-Year CARF Accreditation

START Treatment & Recovery Centers is delighted to announce that we received CARF International accreditation for a period of 3 years for all of START's seven medication assisted treatment programs (MATPs).

This continues the legacy that all of START's MATPs have been reaccredited the maximum 3 years for the eighth consecutive survey.

This endorsement by our peers represents the highest level of accreditation that can be granted to an organization and reflects START's substantial conformance to the CARF standards. In order to receive a Three-Year Accreditation, START underwent a rigorous review process, demonstrating to a team of surveyors during an on-site visit our commitment to offering high-quality services that are measurable, accountable, and maximize recovery potential for the persons we serve.

"With more than 1,000 standards that required the conformance by each program, this achievement is phenomenal!" stated START's Chief Executive Officer Lawrence S. Brown, Jr., MD, MPH, FACP, DFASAM.

CARF is an independent, nonprofit accrediting body whose mission is to promote the quality, value, and optimal outcomes of services through a consultative accreditation process and continuous improvement services that center on enhancing the lives of the persons served.

This recognition reaffirms START Treatment & Recovery Centers' commitment to pursuing excellence and our willingness to continually look for opportunities to improve and develop innovative services for our patients.

START Treatment & Recovery Centers is a 501(c)3 nonprofit organization.
